

Our Vision:

To transform the way the world works, providing better outcomes for people, organizations and the planet.

Our Focus:

To provide a hardware independent, easy to manage endpoint operating system, empowering people with simple yet secure access to their cloud-delivered digital workspaces. Our solutions enable people to work from anywhere on any device while helping to save time, money and even "Go Green".

What we stand for:

Simple

Maximize hardware life to save CapEx

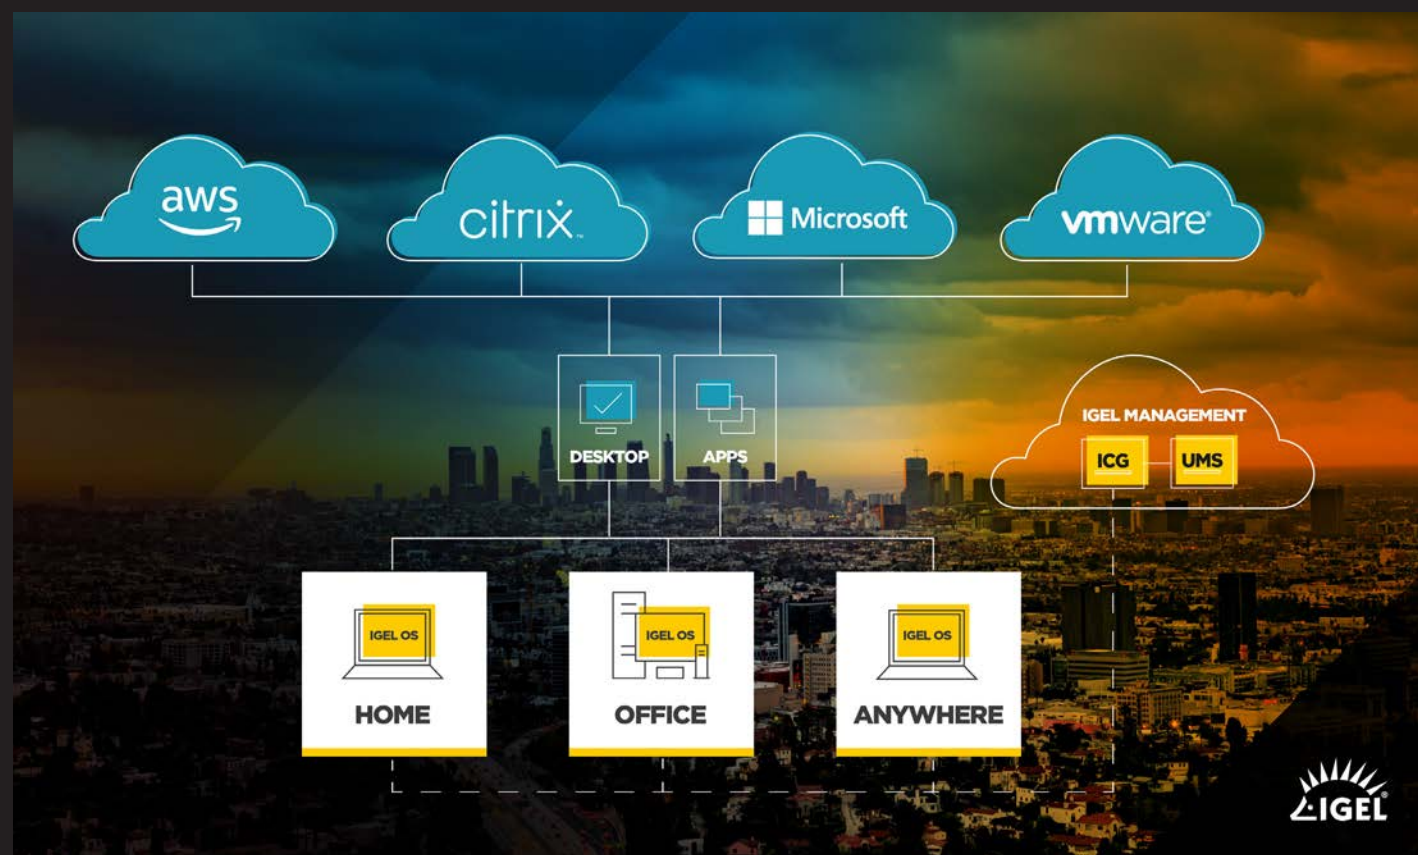

Smart

Easy endpoint management saves OpEx

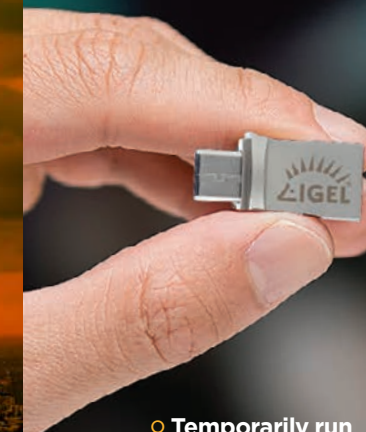

Secure

Protect network edges against attacks

IGEL UD Pocket

- Temporarily run IGEL OS from either a USB-A or a USB-C connector
- Secure and rapid access to the company apps, data and workflows from anywhere
- Repurpose existing hardware, save CapEx

IGEL OS

The most secure, high performance, managed endpoint operating system, purpose built for any cloud.

- Next-gen edge OS designed for cloud workspaces
- Platform independent Linux, built-in enterprise level security
- Read-only, modular, easy configuration
- Advanced multimedia for unified communications and graphics-intensive workloads
- Vast partner ecosystem of integrated technologies supporting numerous peripherals, protocols and ecosystem solutions

Use Cases:

- **Unified Communications**
IGEL OS enables high-fidelity collaboration, optimized for MS Teams, WebEx, and Zoom
- **Work from Anywhere**
Securely navigate company apps and data from any location with an internet connection
- **BYOD - You Choose**
Simply boot IGEL OS on your PC, laptop or any compatible device with IGEL UD Pocket
- **Don't Miss a Beat**
Gain on-demand access to your workspace with IGEL OS, a core element of your business continuity plan

Universal Management Suite (UMS)

Efficient, enterprise-scale management and control

- Easy management & control
- Scale to many thousands of endpoints (up to 300,000)
- HA for non-stop operation
- REST API for the integration of interactive applications
- Custom devices, applications, and protocols support

UMS WEB APP

Web functionality for helpdesk- and device management use cases

IGEL CLOUD GATEWAY

Cloud Gateway ability to manage and control remote/off-network endpoints

SHARED WORKPLACE

Profile-based administration per job role/function, enables the sharing of devices among multiple users

ASSET INVENTORY TRACKER

Peripheral device insight to view info and status of attached peripheral devices

Secure by Design

IGEL OS was created as an edge OS for cloud workspaces. It's secure by design:

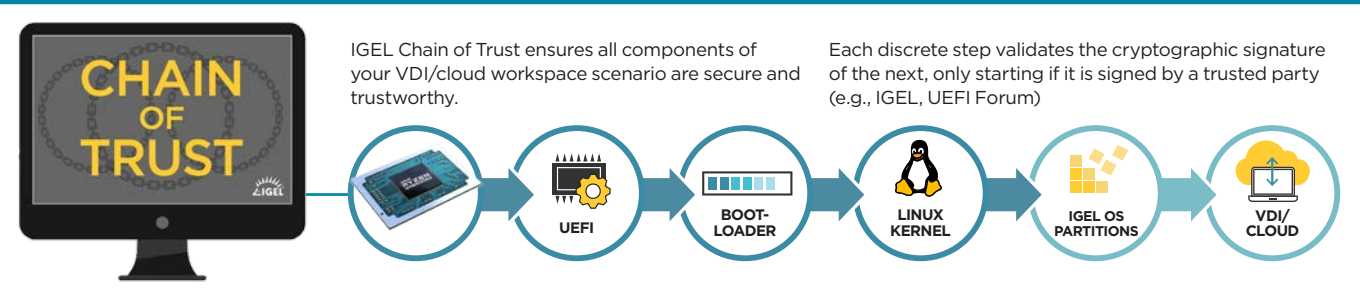

- Linux based: inherently secure and proven to be safer than Windows on an endpoint
- Read-only: locked-down and tamper-proof
- Modular: use only the modules you need to minimize attack surfaces

"IGEL OS has improved the stability of our endpoints, enabled secure access to cloud workspaces for our clinicians and staff members, and streamlined Windows patching and management, which we estimate will lead to \$2 million in savings for our organization over the next three years."

- Kevin Conable, Director, IT Infrastructure at Kaleida Health

Endpoint devices with IGEL OS

 IGEL UD2	 IGEL UD3	 IGEL UD7	 Any Compatible x86-64 Device	 NComputing RX420(IGEL)
Economical and effective access to cloud workspaces	The versatile, multimedia endpoint for secure access to cloud workspaces	The high performance endpoint for graphic-intensive applications in cloud workspaces	IGEL platform-independent software can turn any compatible x86-64 device into a highly secure, fully managed IGEL OS-powered endpoint	Supported by IGEL OS(RPI4), optimized for Citrix environments, cost-effective solution for general purpose computing and IoT
Delivers excellent performance for media consumption and office applications - Ethernet only (no wireless)	Provides a high-fidelity digital experience and flexible expansion capabilities	Transform demanding tasks into a high-fidelity digital experience across up to four 4K displays		

Integrated Technologies

Over 100 IGEL Ready technology partners have integrated their products with IGEL OS.

Advanced Services

To ensure successful and faster time to value IGEL deployments, IGEL provides advanced services to guide customers toward a successful rollout of IGEL OS into their environment.

IGEL consulting & Implementation services
IGEL design, deployment, and customization
IGEL Technical Relationship Manager (TRM) services
Your trusted IGEL expert advisor
IGEL education
Interactive, online, and self-paced training and certifications.

Support options

IGEL software maintenance ensures you have the latest updates, upgrades and features. IGEL helps our customers to achieve the full capabilities of their IGEL solution with three support levels.

Select
Standard business hours
Priority
Standard business hours + 4 business hours response for critical issues
Priority Plus
Standard business hours + 2 hours response for critical issues (24x7)

Life made easy.

The next-gen EDGE OS for cloud workspaces.

Industry impact

- Healthcare**
Meet GDPR, HIPAA, PCI and other compliance requirements by turning any x86-64 device into a highly controlled, secure endpoint and support a broad range of single sign-on, authentication and other peripheral devices.
- Finance/Insurance**
Achieve maximum security and control by turning your PCs, laptops, thin clients and hand-held x86-64 devices into fully controlled, easily managed endpoints from a single console.
- Manufacturing**
Enhanced endpoint security and control for front office, back office and shop floor.

- Higher Education**
Ensure desktop and user experience consistency across all your endpoints while extending the life of your aging PCs and laptops, from classrooms to labs to administrative offices, easily managed from a single console.
- Government**
Minimize the threat of malware and viruses by moving Windows desktops into the secure data center and replacing Windows endpoints with Linux-based endpoints. Extend the useful life of older x86-64 devices.
- Retail**
IGEL OS helps IT administrators overcome many of the pressing challenges in retail, including maintaining payment card industry (PCI) data protection compliance while giving end-users an informed and immersive buying experience.
